## Yield, Duration & Credit Duration

## Performance since 2016

## Industrial Breakdown

## Fund Manager's comment:

July was characterized by "risk-on" mode and the earnings season. Macro indicators have been good to neutral. 10 years government bond yields rose by 10-15bp and the Swedish krona strengthened on the back of strong BNP figure. Credit spreads in EUR tightened 5bp in IG and 25bp in HY. In USD 10bp in IG and 20bp in HY. The Swedish krona market was stable. As stated in several monthly reports, the Swedish krona market is more expensive compared with other markets. Hence, we continue to be cautious.

The fund returned 0,41 per cent in July. The main positive contributors were Recipharm after a strong report and TDC after announcement of divestment of Norwegian business to Telia. The fund bought Kongsbergs Automotive bond on new issue. We are heading into August and September which are usually more tricky months for risk assets. Moreover, central banks continue to decrease liquidity in the markets. The fund has shorter credit duration than normal.
