Fund Manager's Comment (Norrn Active)

June was no exception to the beginning of the year and intramonthly it was very volatile. Initially Norron Active was up 3%, then down 4%, to eventually finish, more or less, flat in June. Events such as the fear of an escalating "trade war" between US, China and Europe, the parliamentary crisis in Italy and Germany's internal political problems create a lot of uncertainty in the markets. The oil producing countries different announcements regarding their production plans have affected the oil price as well.

We saw that fear of an escalating trade war can put an end to the global growth trend we have experienced and put pressure on cyclical stocks. Small caps performed worse than big caps during June as well. Norron Active had a weak month and the fund was down 0,6 percent while SBX was up 0,35 percent. The main positive contributors were Aker ASA, SEB, Sandvik, Medicover and Swedbank and the main negative contributors were Academedia and IAR System.
